Response to Arguments

1. Applicant's arguments filed on July 26, 2004 have been fully considered and subsequently found persuasive.

Allowable Subject Matter

2. **Claims 1 – 44 are allowed.** The following is an examiner's statement of reasons for allowance:

Regarding to the claimed invention, the prior art of record fails to show or render obvious of a joint demodulator configured to generate estimated frequency/frequency error for both first and second signals and included first and second automatic frequency controls. The both first and second automatic frequency controls are responsive to respective first and second estimated frequency/frequency error signals. The both first and second automatic frequency controls can produce respective first and second frequency offset signals that are applied to the joint demodulator. Alternatively, a difference between them can be applied to the joint demodulator and the first frequency offset is applied to the down-converter that down-converts the jointly received first and second signals and provided the down-converted signals to the joint demodulator.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
